

Linear Regression:-

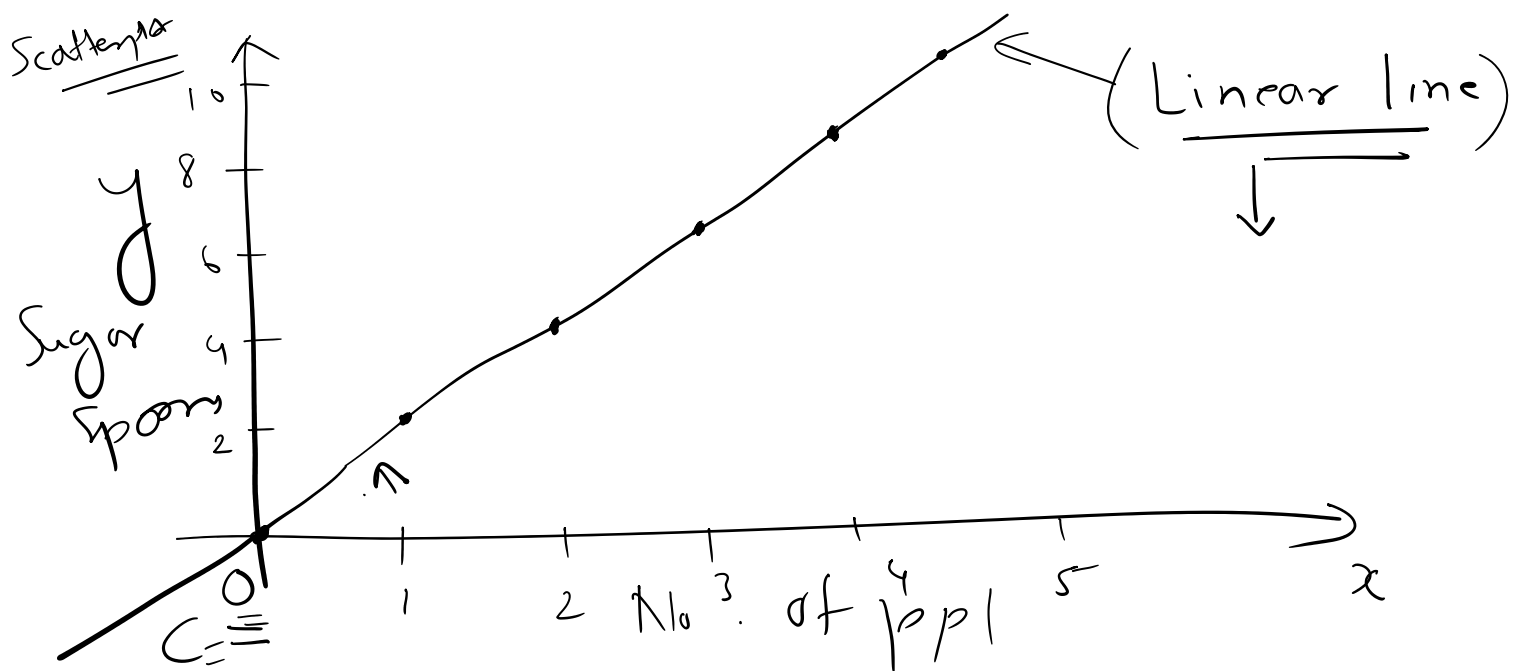

Tea for the guests.

Independent
Variable
 $X =$

No. of ppl.	No. of teaspoons of sugar.
<u>1</u>	<u>2</u>
<u>2</u>	<u>4</u>
3	6
4	8
5	10
6	12
7	

Dependent
variable
Target

(y)

Any General Linear Line eqⁿ: -

$$\boxed{y = mx + c}$$

For our guest example, $c=0$,

$$y = mx + 0$$

$$\boxed{y = mx}$$

$$\text{No. of sug spoons} = m \times \text{No. of } \underline{\text{ppl.}}$$

y = No. of Sugar spoons

x = No. of ppl.

m = Slope of the line.

c = meeting point of the line with y -axis.

$$\text{No. of SS} = m * \text{No. of ppl.}$$

$$\underline{\underline{m=2}}$$

50

Linear Regression
↓
Equation

$$\boxed{\text{No. of SS} = \underline{2} * \underline{\text{No. of ppl.}}}$$

$$\begin{aligned} \text{No. of SS} &= 2 * 12 \\ &= \underline{\underline{24}} \end{aligned}$$

$$\begin{aligned} \text{No. of SS} &= 2 * 50 \\ &= \underline{\underline{100}} \end{aligned}$$

We established the relⁿ betⁿ Indep & dep
by find the values of m & c

$$\boxed{y = 2x} \leftarrow$$

Yrs. of Exp	Salary

$y = mx + c \Rightarrow \text{Salary} = m \times \text{Yrs. of Exp} + c$

x_3	x_1	x_2	y
Nr. of papers handed in	Edu. Qualification	Yr. of Exp	Salary
1			

$$y = m_1 x_1 + m_2 x_2 + m_3 x_3 + c$$

General linear Reg Eqn :-

$$y = \underline{m_1}x_1 + \underline{m_2}x_2 + m_3x_3 + \dots + c_1 + \underline{\underline{c_2 + c_3 \dots}}$$

$$y = \underline{\underline{\beta_0}} + \underline{\beta_1}x_1 + \underline{\beta_2}x_2 + \beta_3x_3 + \dots$$

* Simple Linear Regression: - $y = \beta_0 + \beta x$
 \downarrow
 only 1 indep
 variable

* Multiple Linear Regression: - $y = \beta_0 + \beta_1 x_1 + \beta_2 x_2 + \dots$
 $\uparrow \quad \uparrow \quad \uparrow \uparrow \quad \uparrow \uparrow$
